

Administration de la navigation aérienne

**Aeronautical Climatological Summary
Luxembourg Findel ELLX
2015 to 2024**

Table of contents

1	Surface wind	3
1.1	Wind roses	3
1.1.1	Wind rose during ten-year period	3
1.1.2	Seasonal wind roses	4
1.1.3	Monthly wind roses	6
1.2	Wind speed and direction	12
1.2.1	Frequencies of wind speed and direction per ten-year period	12
1.2.2	Frequencies of wind speed and direction per season	13
1.2.3	Frequencies of wind speed and direction per month	14
1.2.4	Frequencies of wind speed and direction per hour	17
1.3	Head/tailwind and crosswind RWY 24 (06)	23
1.3.1	Head/tailwind and crosswind RWY 24 (06) per ten-year period	23
1.3.2	Head/tailwind and crosswind RWY 24 (06) per season	23
1.3.3	Head/tailwind and crosswind RWY 24 (06) per month	24
1.4	Wind gusts	26
1.4.1	Wind gusts per ten-year period	26
1.4.2	Wind gusts per season	27
1.4.3	Wind gusts per month	31
2	Visibility and ceiling	43
2.1	Visibility	43
2.1.1	Hourly visibility per ten-year period	43
2.1.2	Monthly visibility per ten-year period	43
2.1.3	Hourly visibility per season	44
2.1.4	Hourly visibility per month	46
2.2	Runway visual range (RVR)	52
2.2.1	Hourly RVR per ten-year period	52
2.2.2	Monthly RVR per ten-year period	52
2.2.3	Hourly RVR per season	53
2.2.4	Hourly RVR per month	55
2.3	Ceiling	61
2.3.1	Hourly ceiling per ten-year period	61
2.3.2	Monthly ceiling per ten-year period	61
2.3.3	Hourly ceiling per season	62
2.3.4	Hourly ceiling per month	64
2.4	Runway Visual Range (RVR) and ceiling	70
2.4.1	Hourly RVR and ceiling per ten-year period	70
2.4.2	Monthly RVR and ceiling per ten-year period	70
2.4.3	Hourly RVR and ceiling per season	71
2.4.4	Hourly RVR and ceiling per month	73
2.5	Visibility and ceiling	79
2.5.1	Hourly frequencies of visibility and ceiling per ten-year period	79
2.5.2	Monthly frequencies of visibility and ceiling per ten-year period	79
2.5.3	Hourly frequencies of visibility and ceiling per season	80
2.5.4	Hourly frequencies of visibility and ceiling per month	82
2.6	Runway Visual Range (RVR) or ceiling	88
2.6.1	Hourly RVR or ceiling per ten-year period	88
2.6.2	Monthly RVR or ceiling per ten-year period	88
2.6.3	Hourly RVR or ceiling per season	89
2.6.4	Hourly RVR or ceiling per month	91

2.7	Visibility or ceiling	97
2.7.1	Hourly frequencies of visibility or ceiling per ten-year period	97
2.7.2	Monthly frequencies of visibility or ceiling per ten-year period	97
2.7.3	Hourly frequencies of visibility or ceiling per season	98
2.7.4	Hourly frequencies of visibility or ceiling per month	100
3	Air temperature	106
3.1	Frequencies of mean air temperature	106
3.1.1	Hourly frequencies of mean air temperature per ten-year period	106
3.1.2	Monthly frequencies of mean air temperature per ten-year period	107
3.1.3	Hourly frequencies of mean air temperature per month	107
3.2	Maximum air temperature	113
3.2.1	Maximum air temperature per month	113
3.2.2	Maximum air temperature per ten-year period	113
3.3	Minimum air temperature	113
3.3.1	Minimum air temperature per month	113
3.3.2	Minimum air temperature per ten-year period	113
3.4	Mean air temperature	114
3.4.1	Mean maximum air temperature per ten-year period	114
3.4.2	Mean minimum air temperature per ten-year period	114
4	Atmospheric pressure at nautical height (QNH)	115
4.1	Mean Pressure (QNH)	115
4.2	Minimum Pressure (QNH)	115
4.2.1	Minimum QNH per month	115
4.2.2	Minimum QNH per ten-year period	115
4.3	Maximum Pressure (QNH)	116
4.3.1	Maximum QNH per month	116
4.3.2	Maximum QNH per ten-year period	116
5	Weather phenomena	117
5.1	Freezing precipitation	117
5.2	Snowfall	117
5.3	Hail	117
5.4	Snow pellets	117
5.5	Thunderstorm	118
5.6	Fog	118
5.7	Shallow and vicinity fog	118
5.8	Freezing fog	118
5.9	Rain	119
5.10	Drizzle	119

Introduction

ICAO recommends that meteorological observations for aerodromes should be collected, processed and stored in a form suitable for the preparation of aerodrome climatological information. A description of the content is listed in ICAO Annex 3, Appendix 7 "Technical specifications related to aeronautical climatological information". The climatological summaries are based on the models given in the Technical Regulations of WMO No. 49, Volume II.

The aeronautical climatological summary can be used by all stakeholders of the airport Luxembourg/Findel (ELLX) such as operators and administrations as well as other aeronautical users (e.g. civil aviation airlines, private pilots). The summary of aeronautical information can assist the aviation clients in strategic and operational planning. The report is not intended for any other commercial purposes than aviation.

This report summarizes

- mean values and variations, including maximum and minimum values of meteorological elements
- the frequency of occurrence of specified values of one, or of a combination of two or more, elements.
- the frequency of occurrence of present weather phenomena affecting flight operations at the aerodrome.

The aeronautical climatological information is based on half-hourly METAR observations at hh:20 and hh:50 (Meteorological Aerodrome Routine Reports) made over a period of ten consecutive years between 2004 and 2013. The period will be updated or extended by the addition of more recent data as soon as practicable. The reference time is UTC. Due to the limited night-time operations at the airport the observers have a regular break between 00:20 UTC and 02:20 UTC. All reports during this time are usually AUTO METARs.

The number of missing values (N/A) in percentage is indicated in each table. Missing values could be caused by AUTO METARS for certain parameters or technical issues with the AWOS system. N/A is the percentage of METAR parameters that are not available in relation to the total number of parameters that could be theoretically available for each period selected. For all AUTO METARs manual observations of visibility, cloud information and present weather phenomena are not considered for the analysis. The frequencies in each table are calculated by using all data available (theoretical number of values minus number of missing values). For hourly statistics the frequencies are based on the periods concerned. In case of the combination ("and" operator) of two meteorological elements N/A is valid if one of the values is missing. Figures and tables are generated for the ten-year period, meteorological seasons winter (December, January, February), spring (March, April, May), summer (June, July, August), autumn (September, October, November) and individual months.

The geographical coordinates of the aerodrome reference point (ARP) are: 49°37'24"N and 006°12'16"E. The elevation of the ARP is 1234 ft (376.1 m). Until 2020 the measurement site for the meteorological instruments was located at 49°37'33.9"N and 6°12'12.5"E. From 01.01.2021 the measurement site was moved to another location at 49°37'57.547"N and 6°13'58.543"E. The elevation of the new measurement site is 367.93 m. The elevation of 376.12 m still refers to the elevation to which the "station atmospheric pressure" (QFE) is reported. The sensors to measure the Runway Visual Range (RVR) are located at three positions along the runway. Cloud-base height, visibility and present weather phenomena are manually derived by the observer.

Fields with a light grey shading represent data where the value is greater than 0.

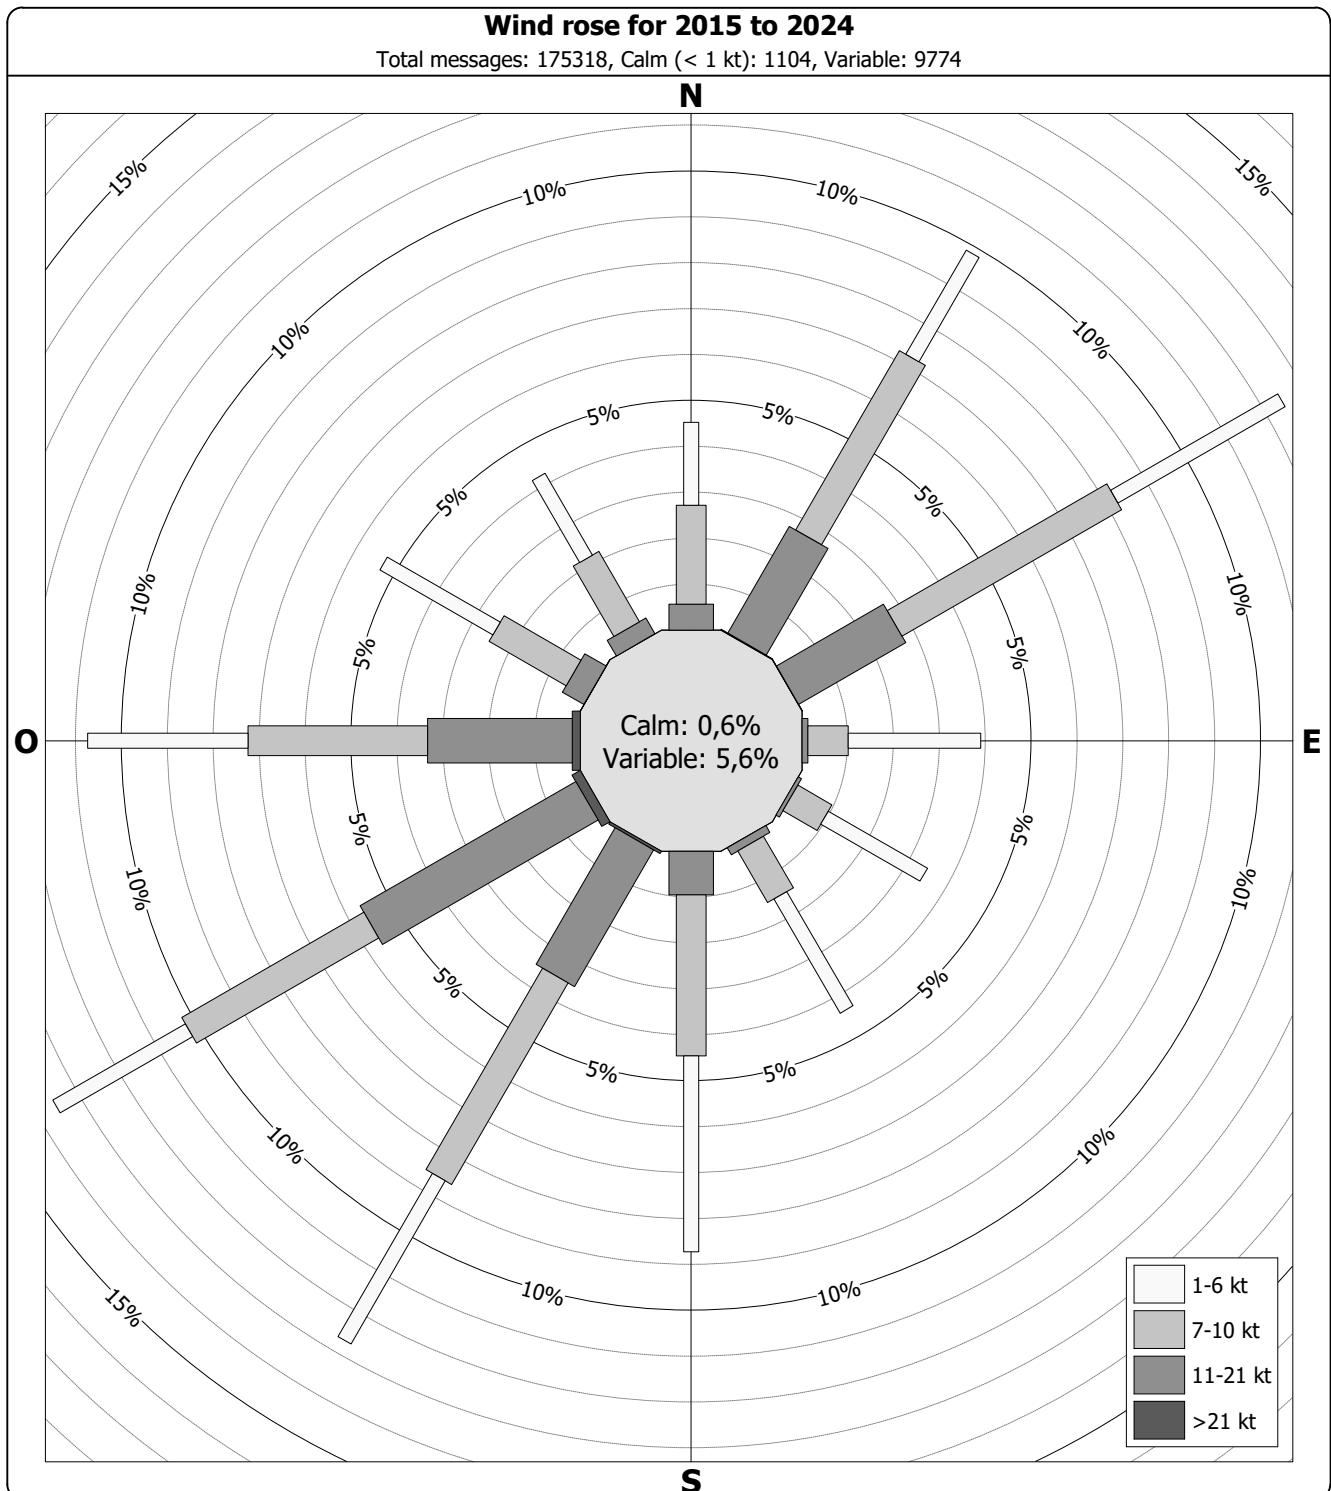

In case of queries or clarification, please revert to the Climate Data Division (climatologie@airport.etat.lu). The tables in the report have been compiled by Eric Michels. Front cover photography courtesy of Luc Willems.

1 Surface wind

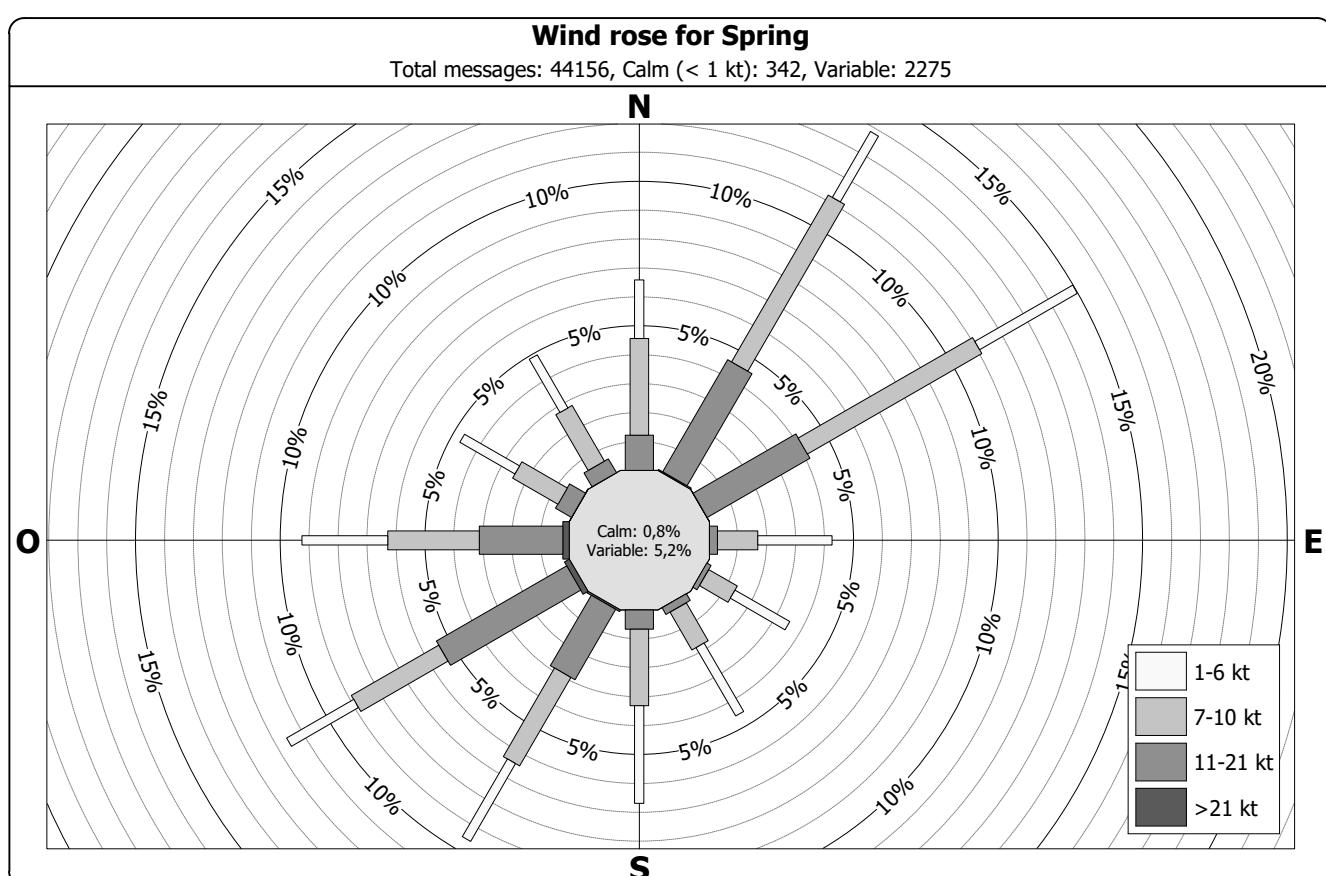

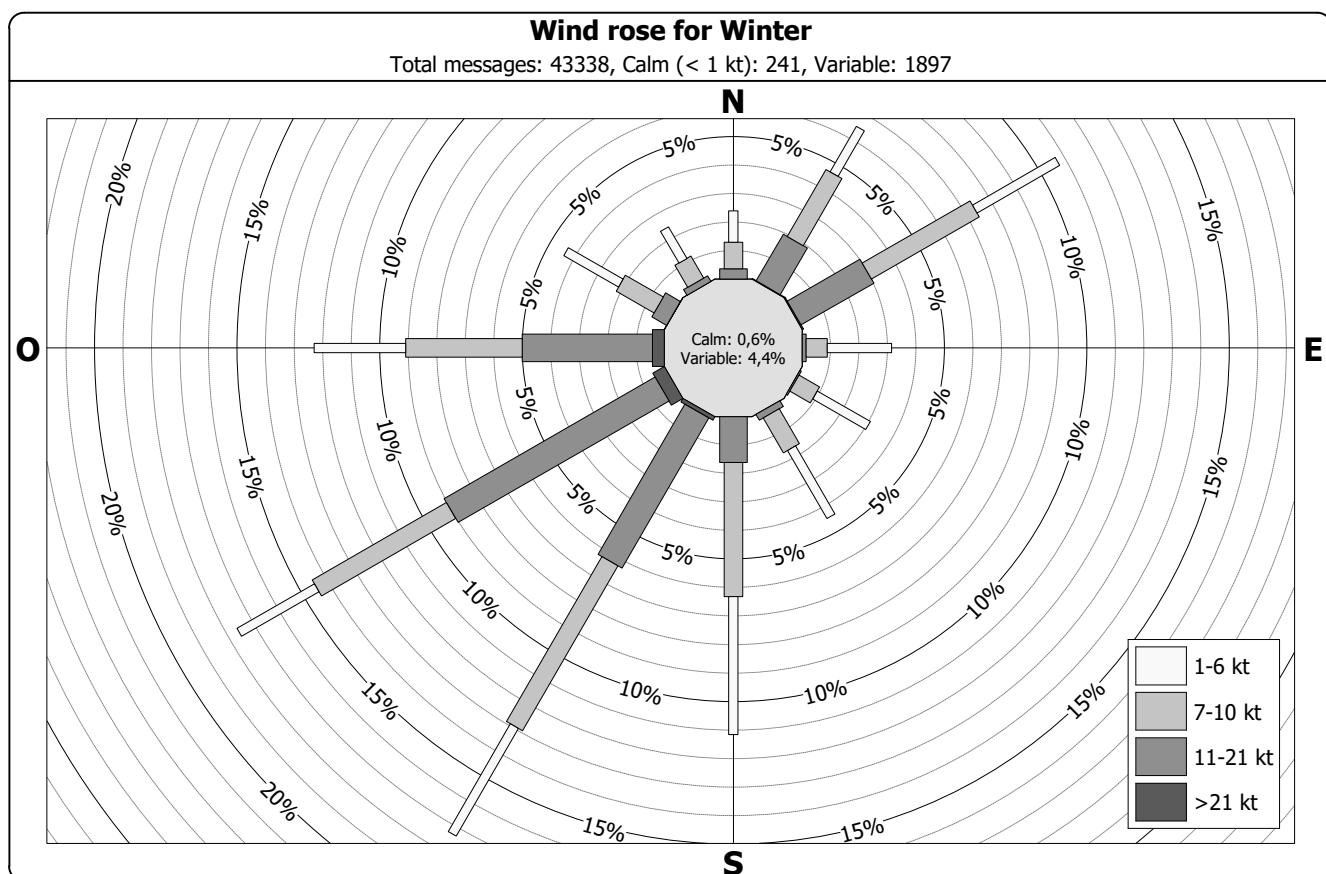

The anemometers and wind vanes are installed at a standard height of approximately 10 meters above ground. The mean direction and the mean speed of the surface wind are measured in degrees rounded off to the nearest 10 degrees and knots, respectively. When the wind speed is less than 1 kt, the value is indicated as calm (00000KT). Variable winds are defined as VRB in METARs (e.g. VRB01KT...).

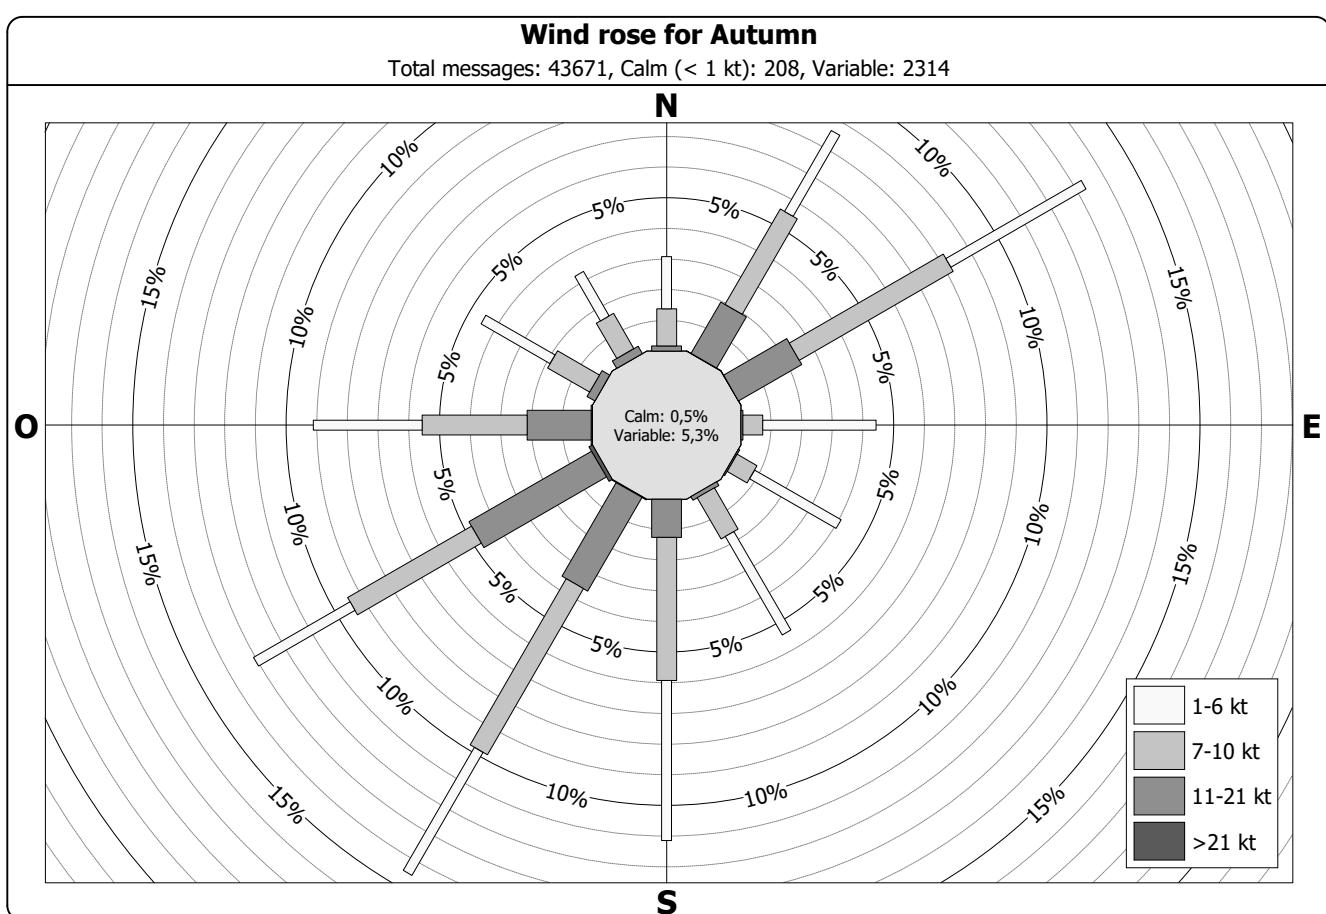

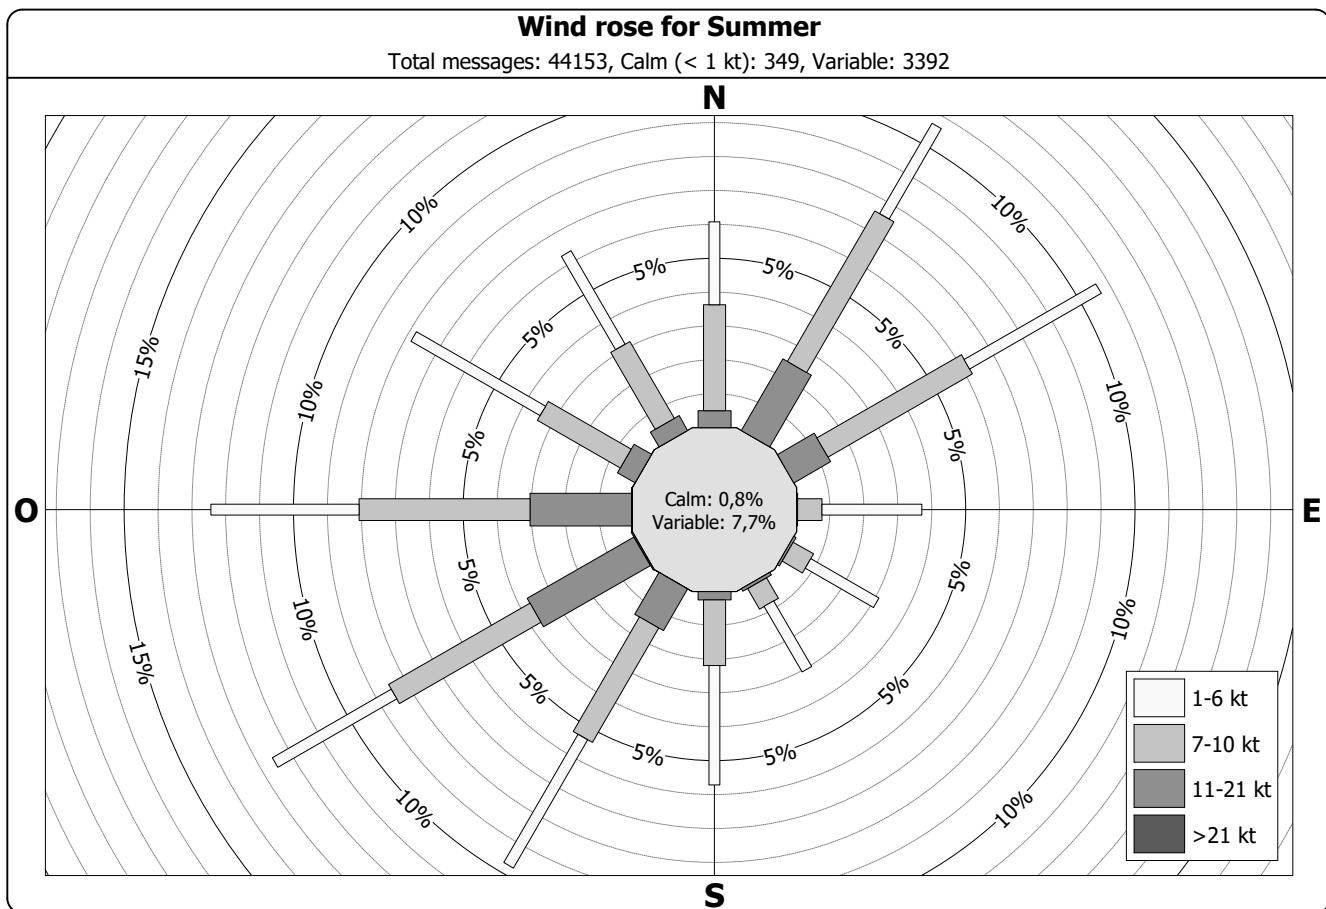

1.1 Wind roses

1.1.1 Wind rose during ten-year period

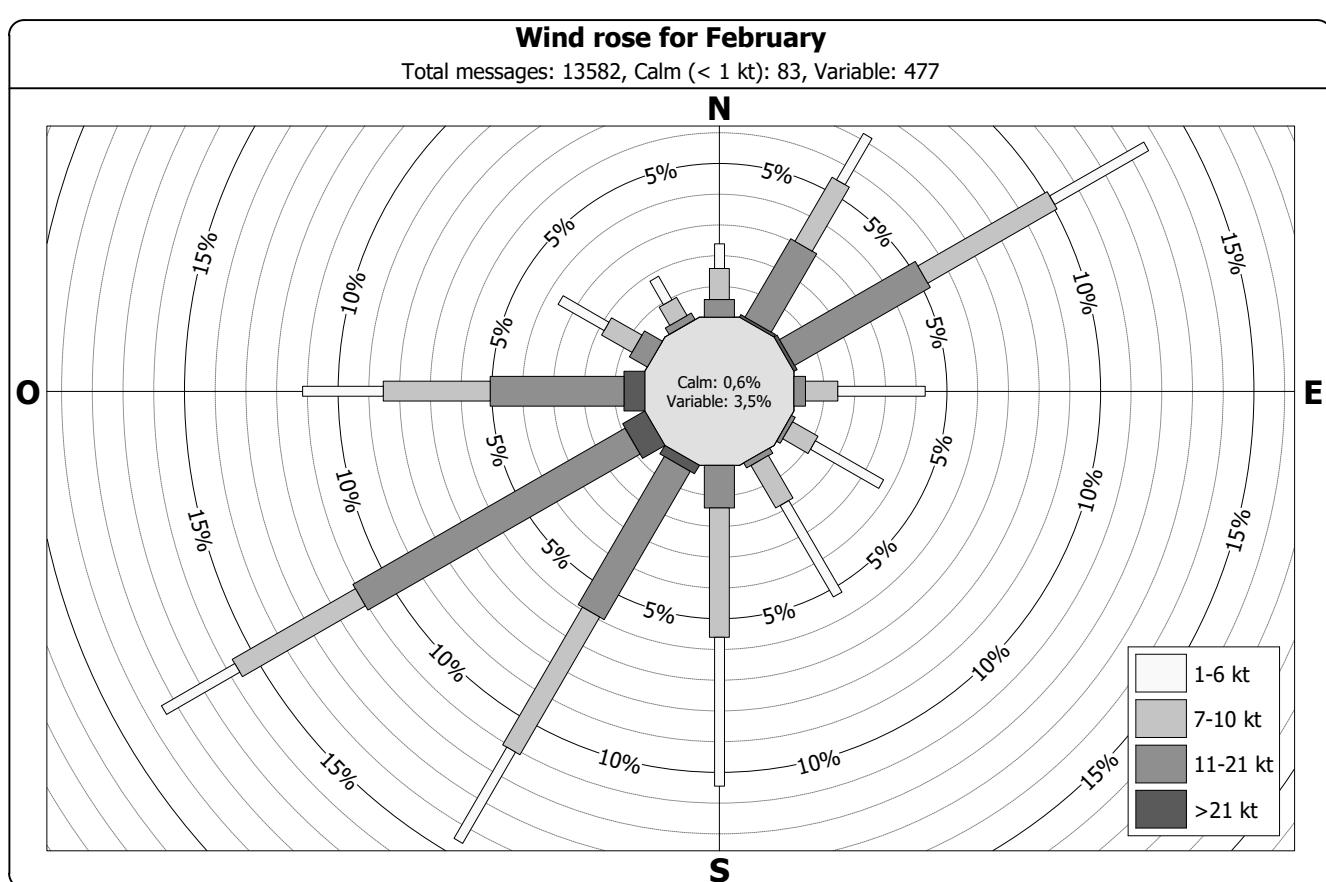

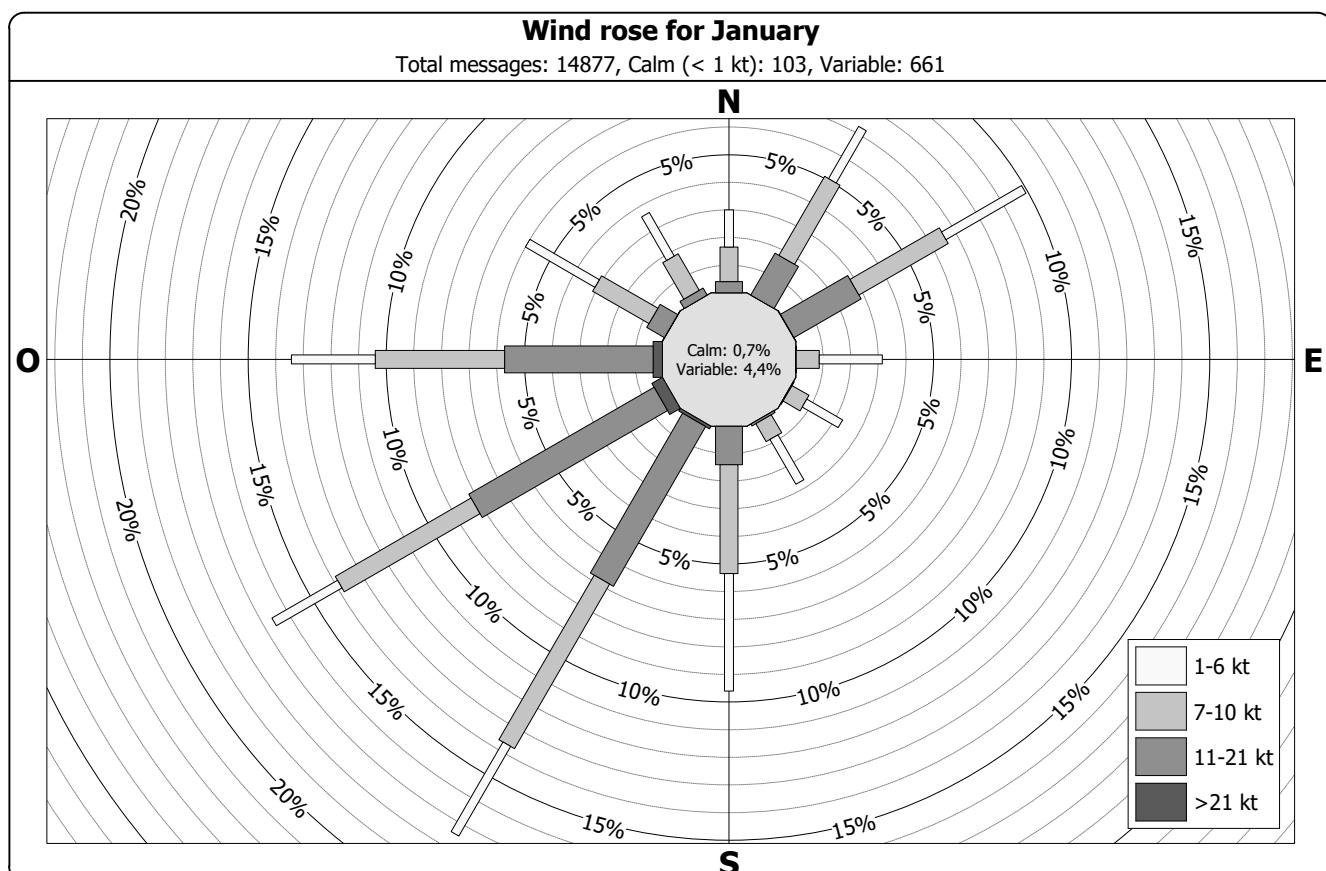

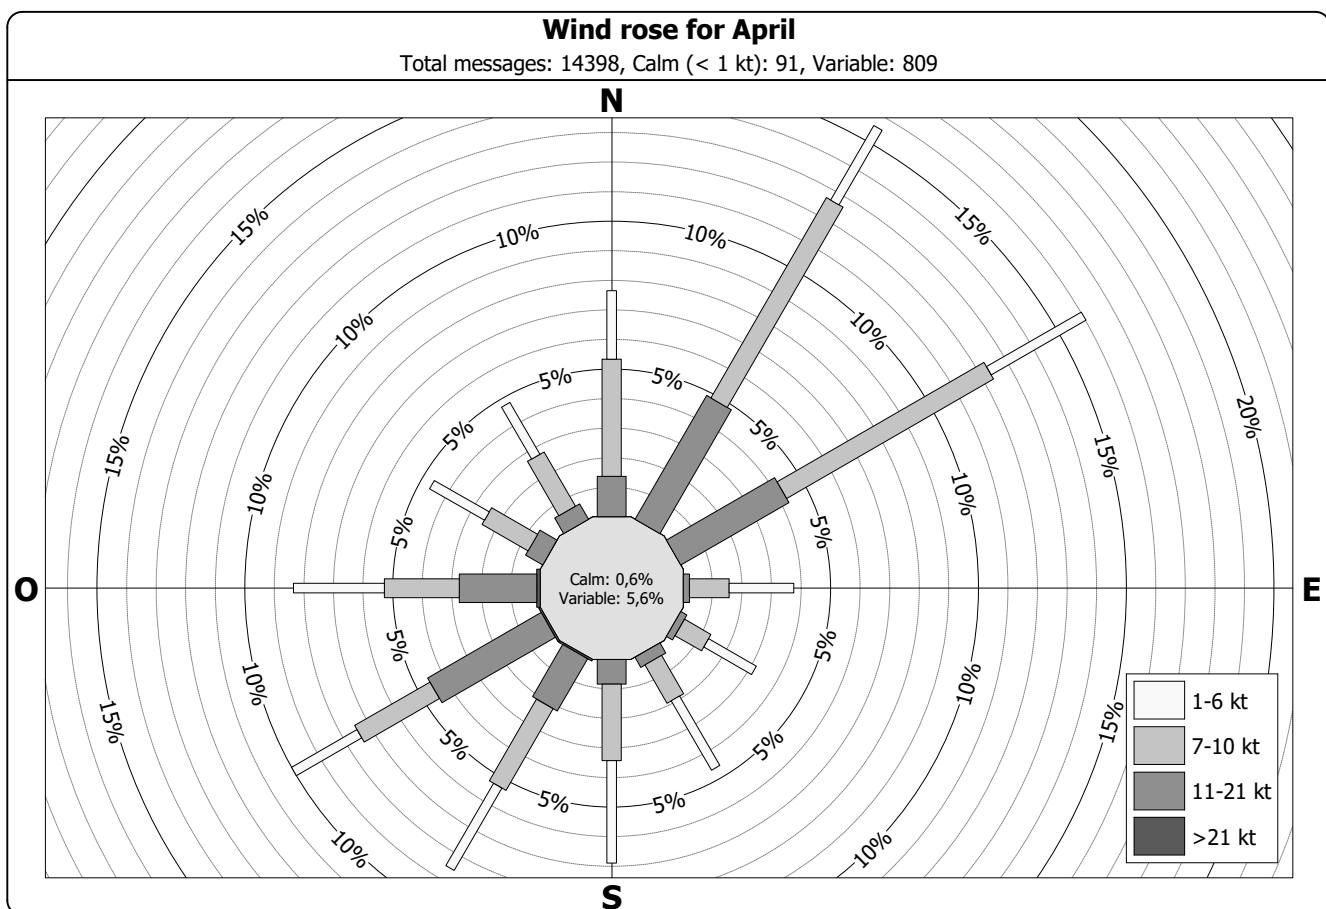

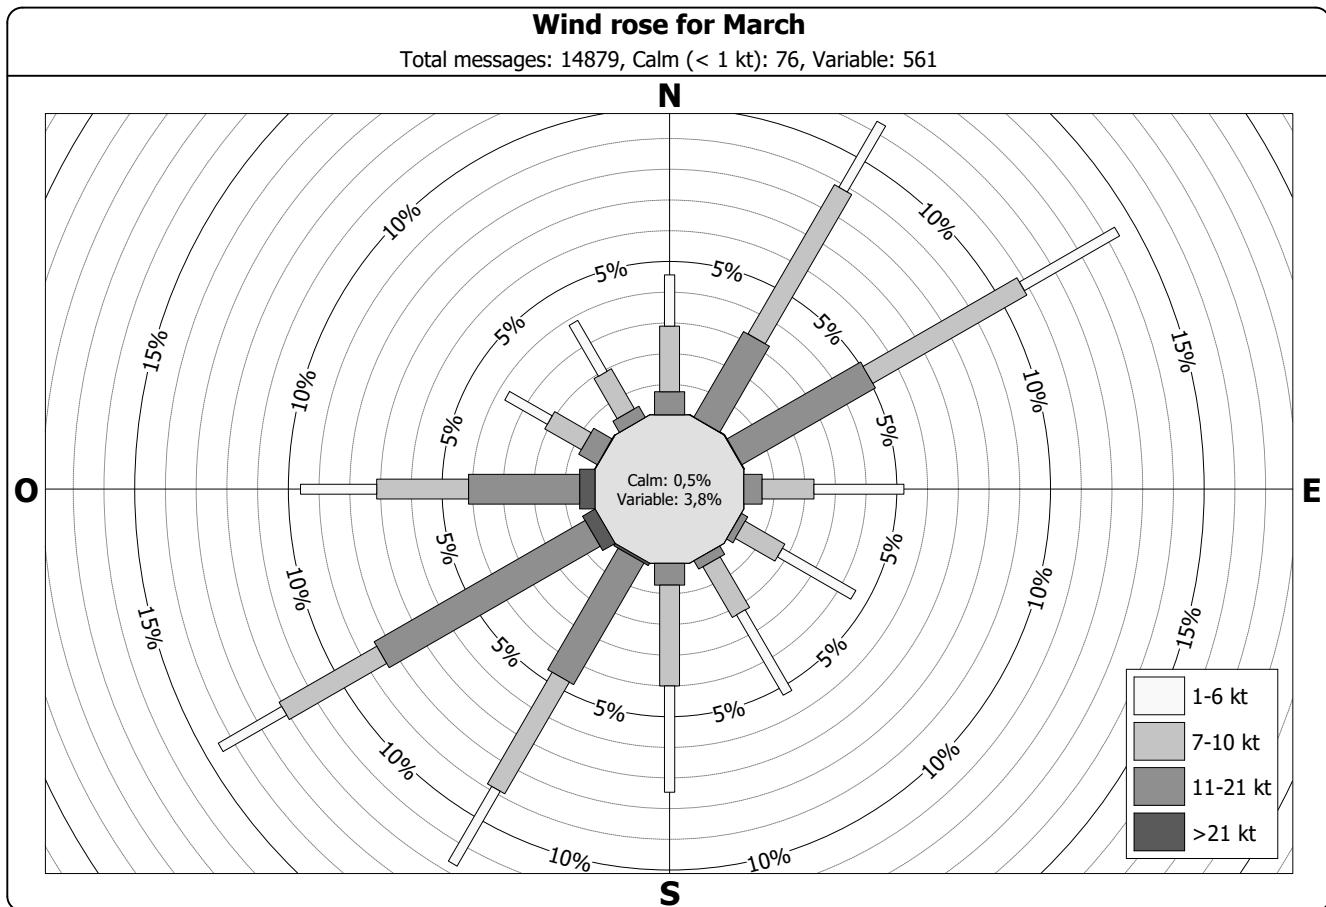

1.1.2 Seasonal wind roses

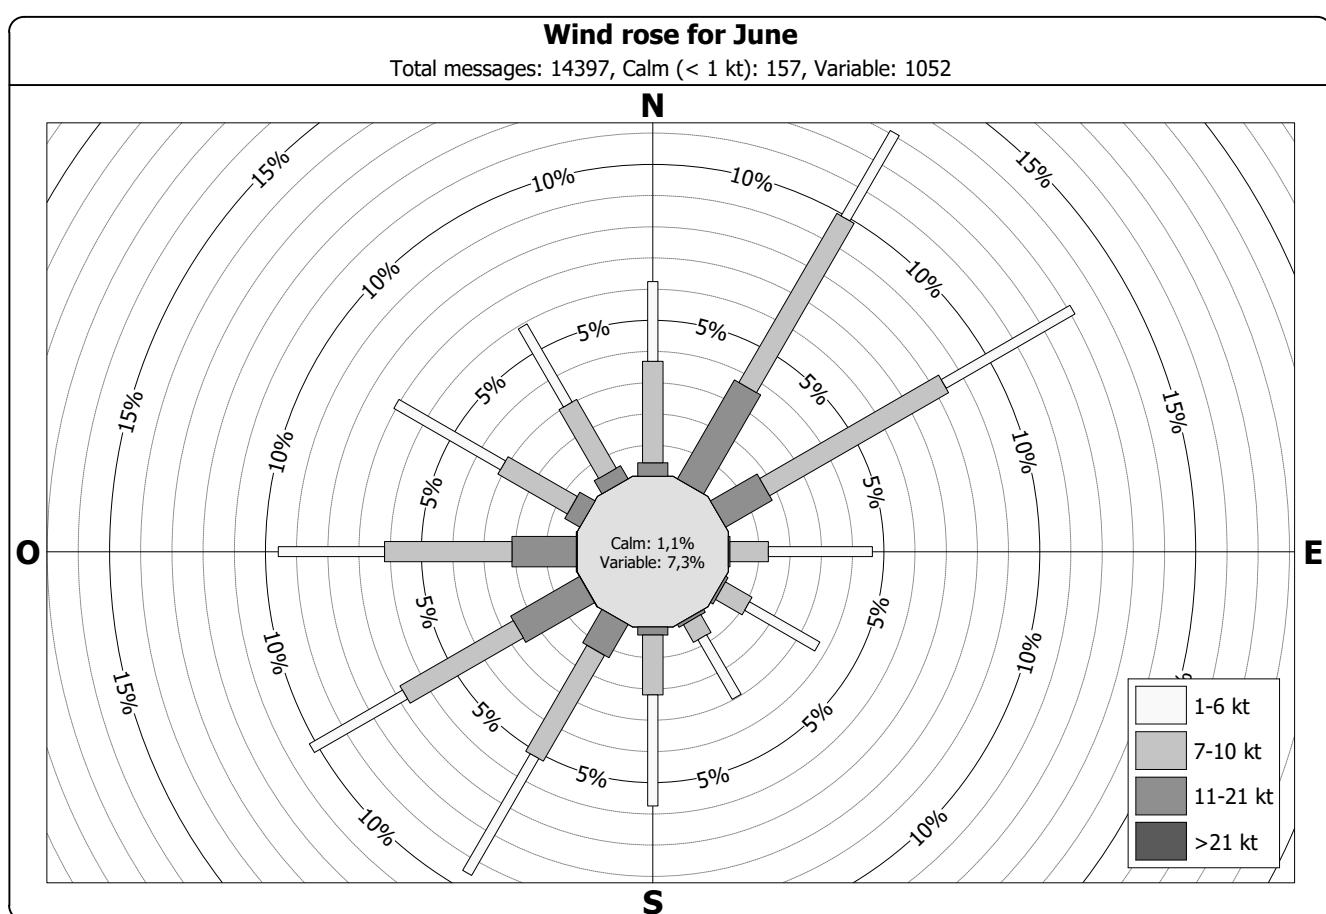

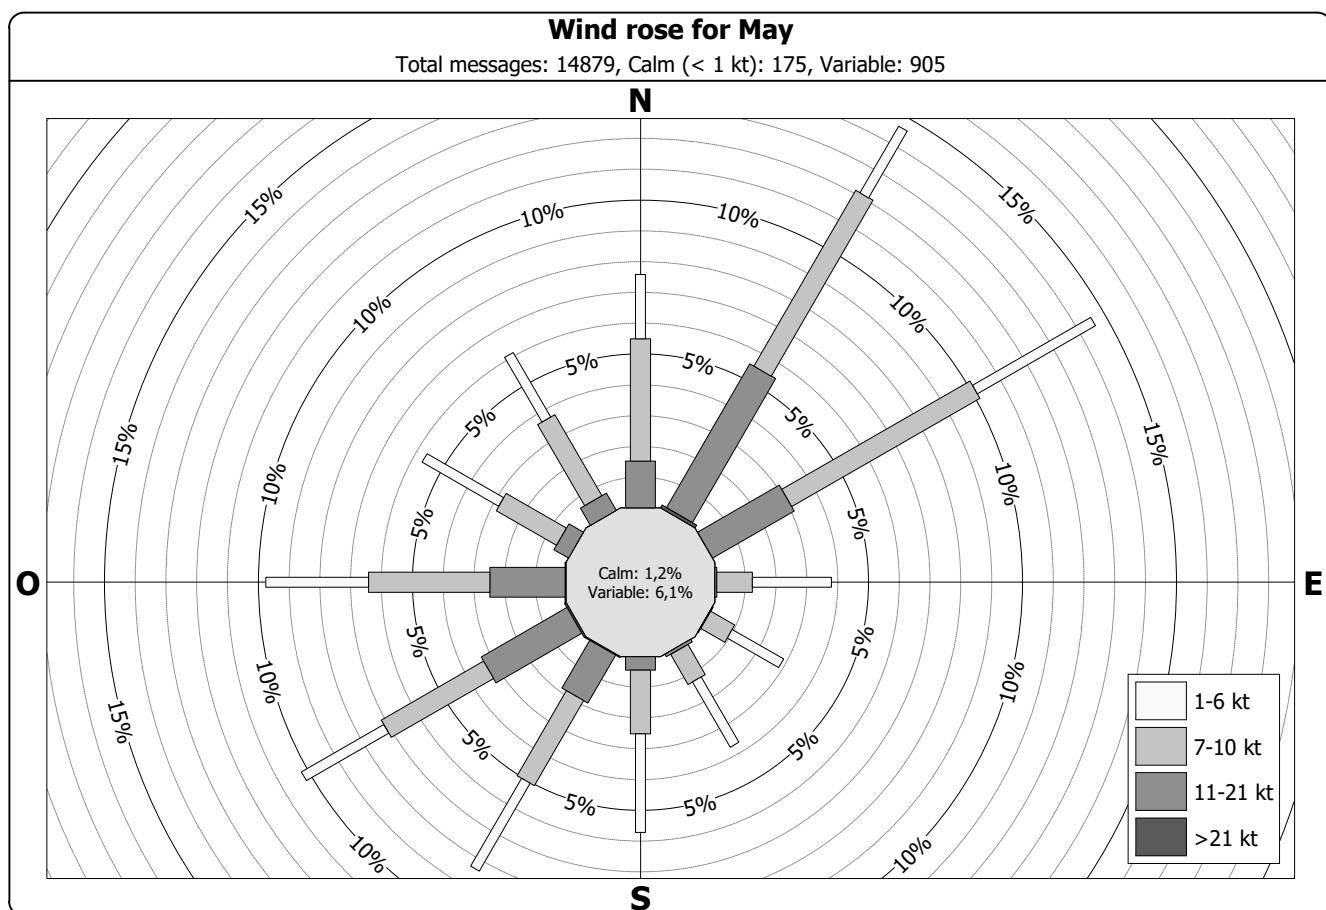

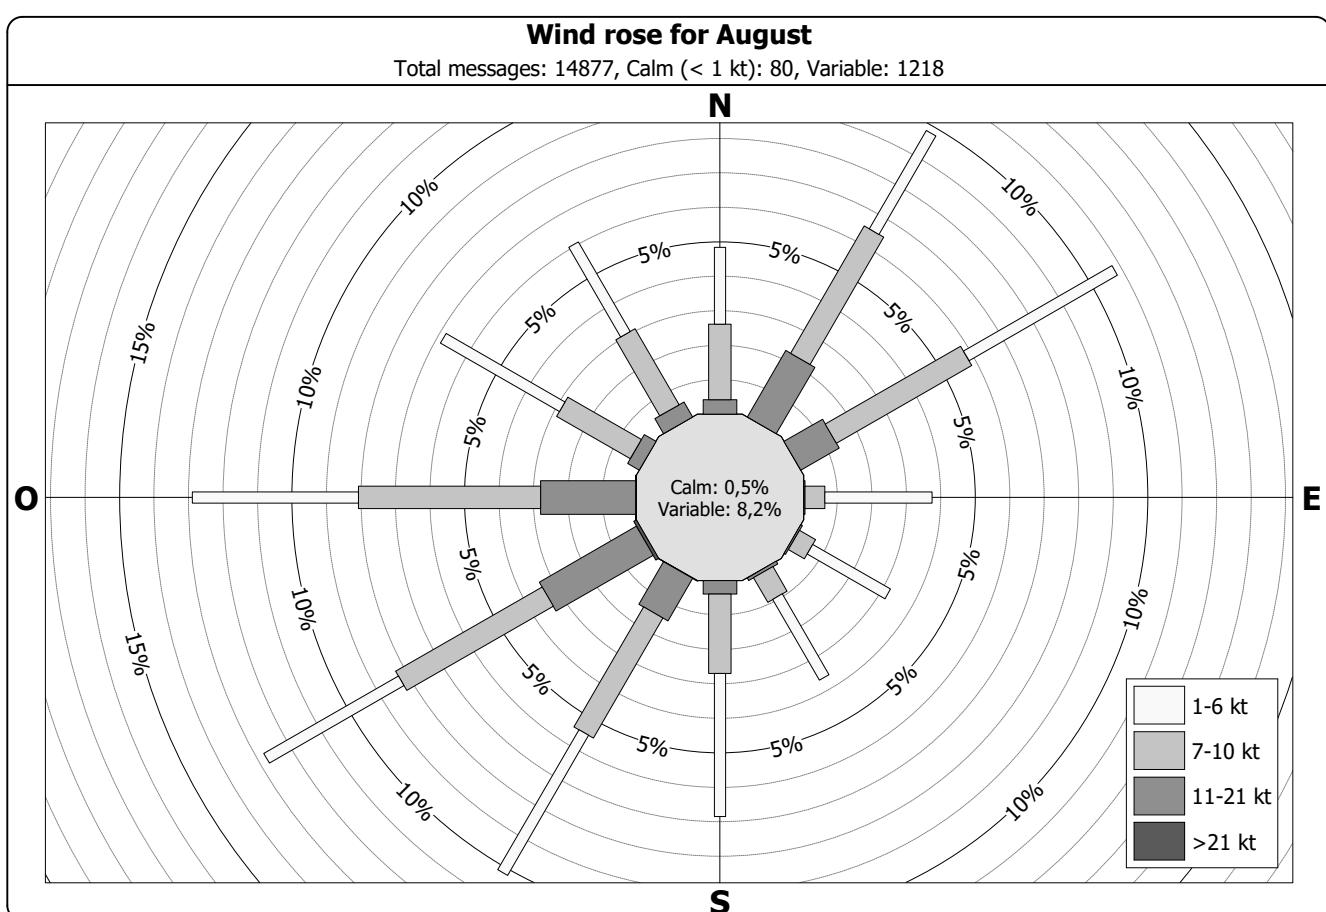

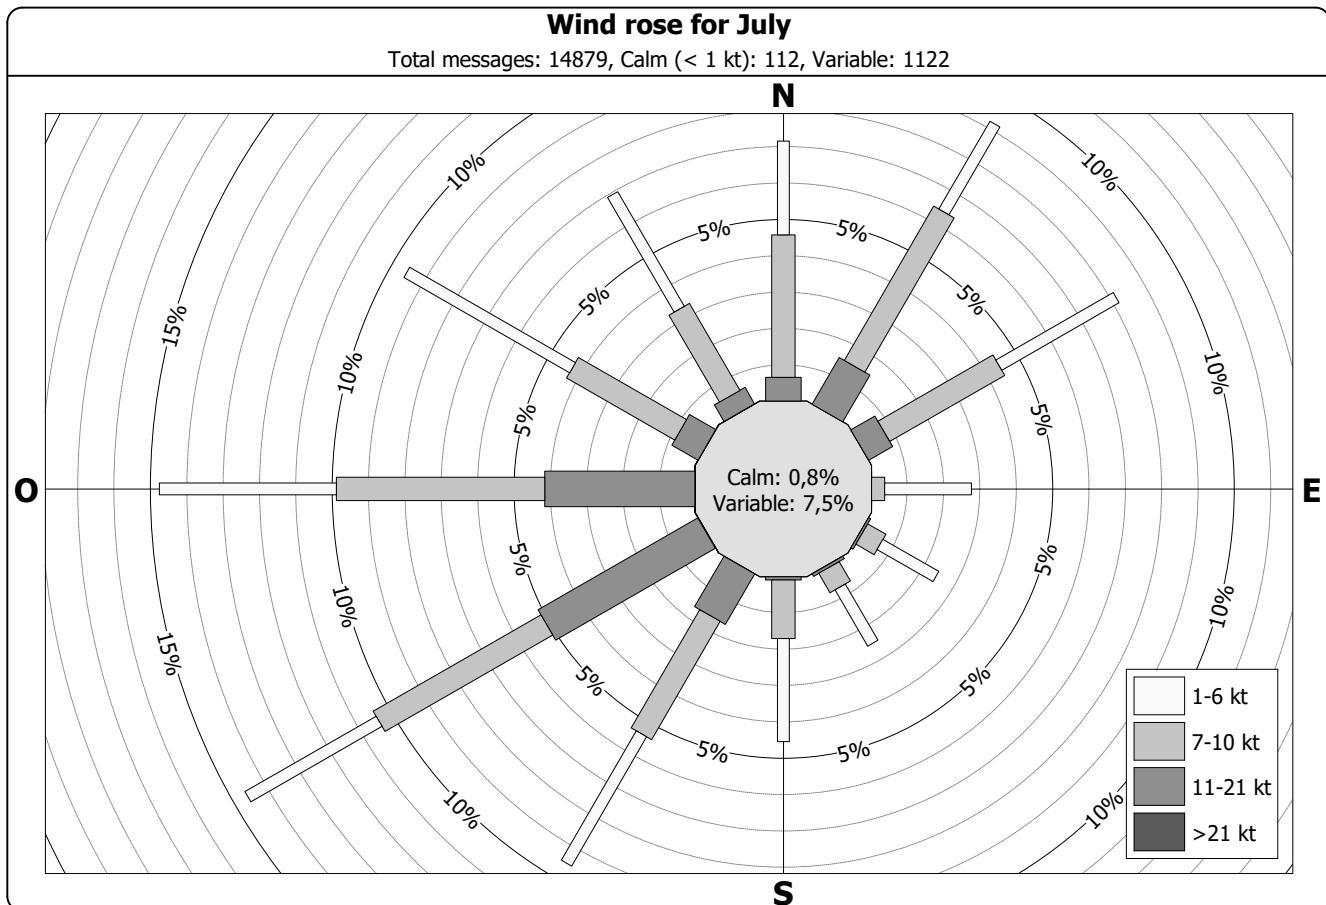

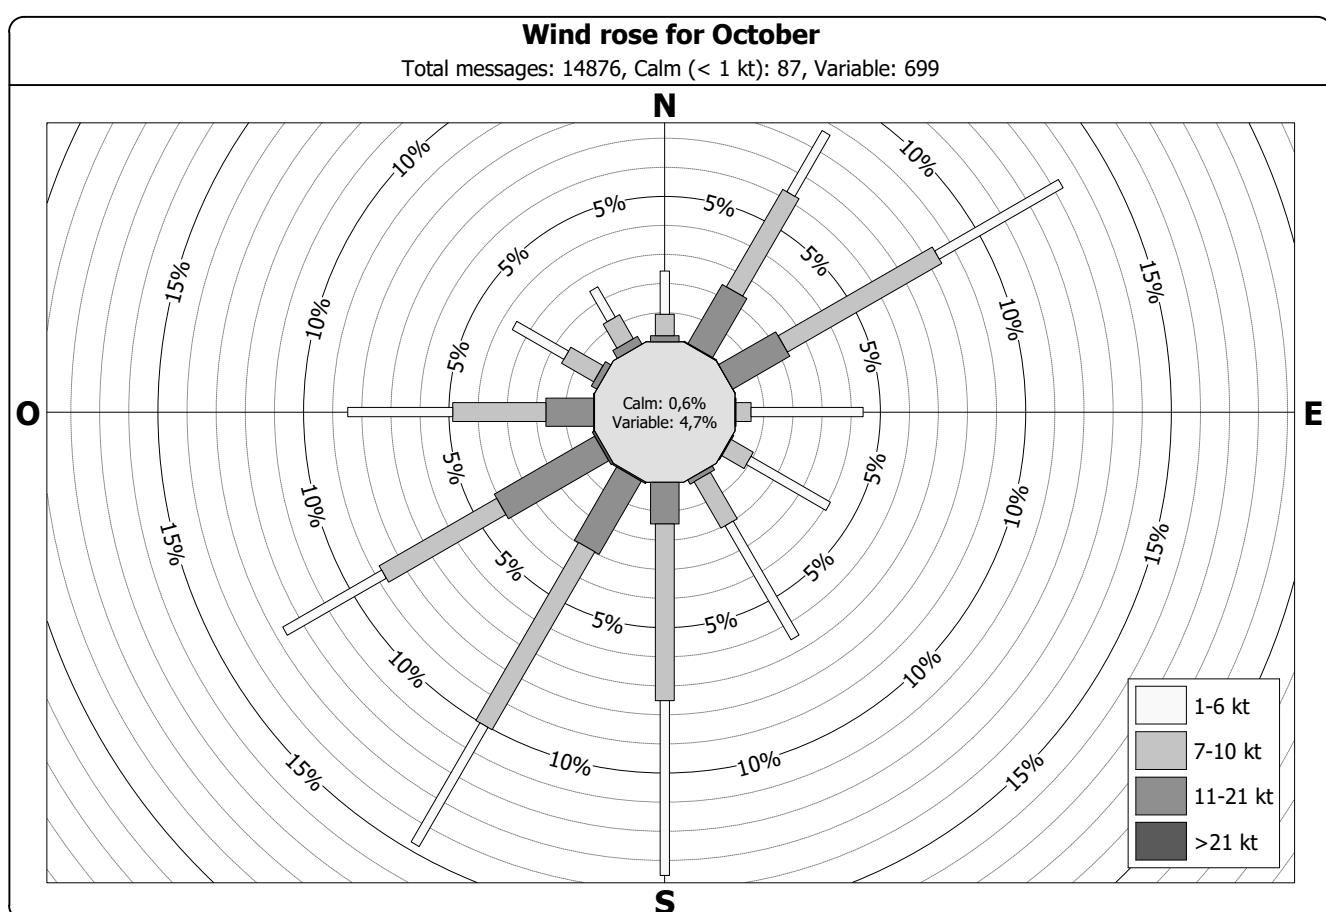

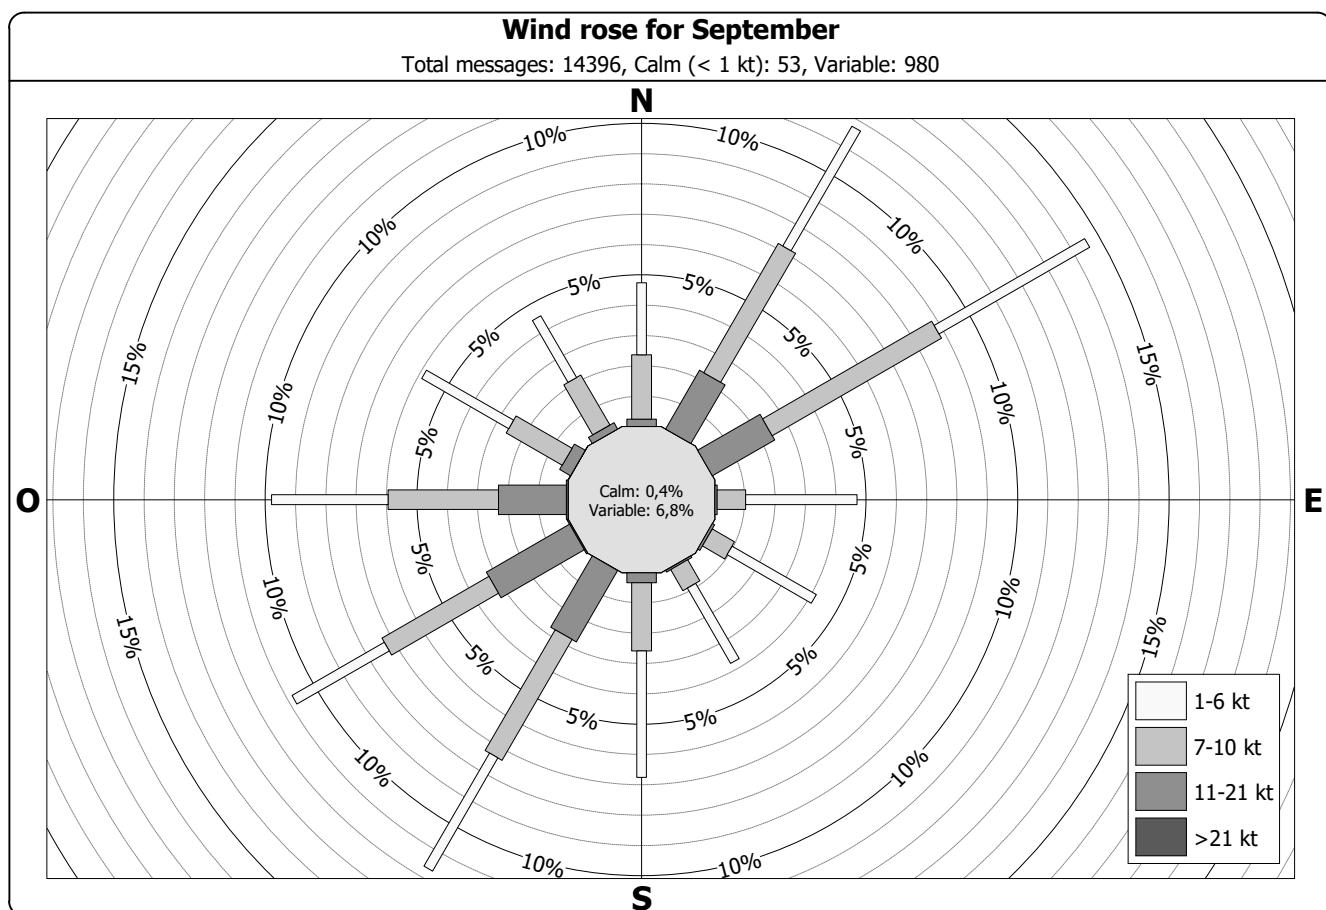

1.1.3 Monthly wind roses

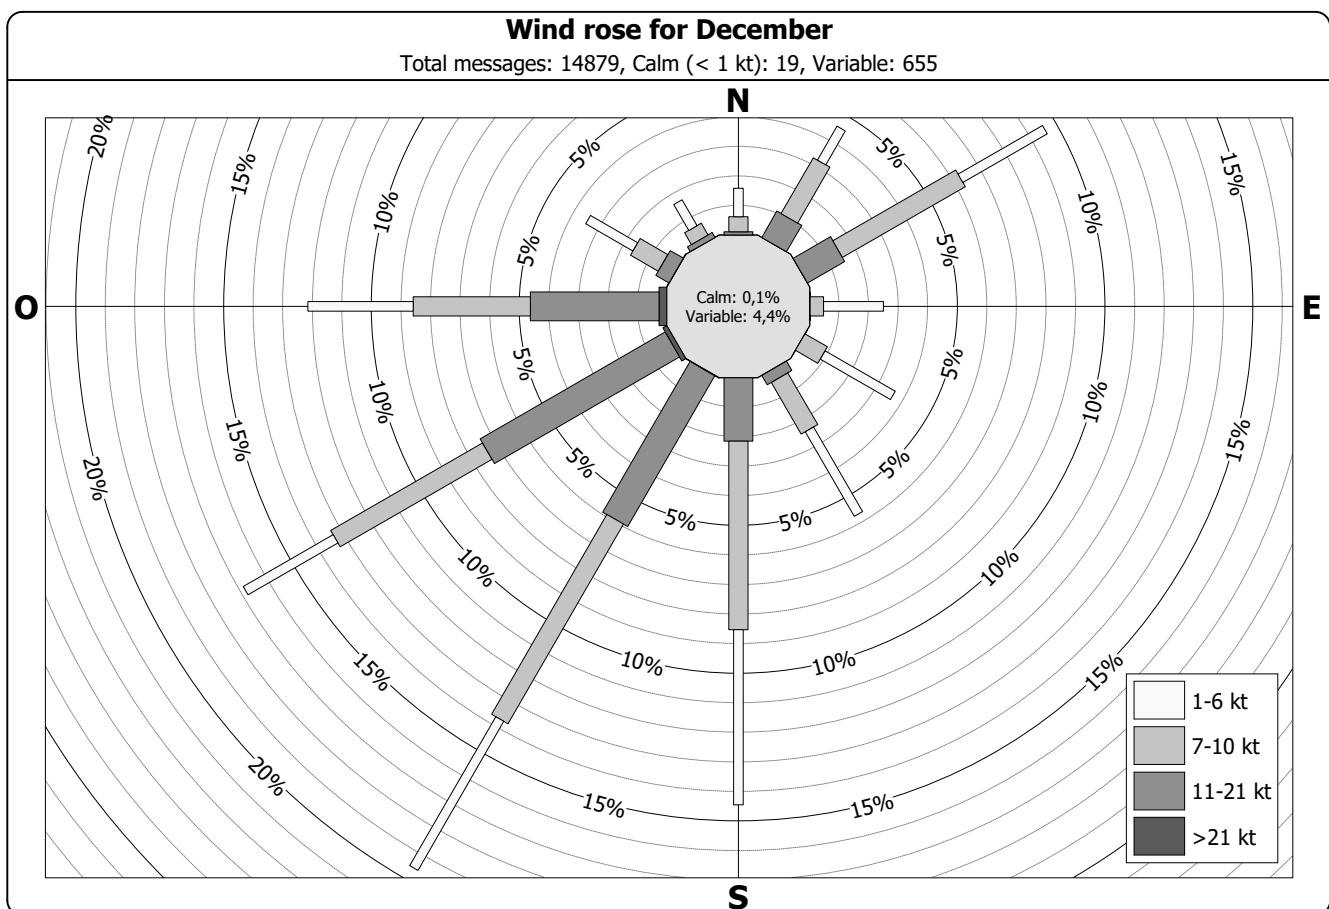

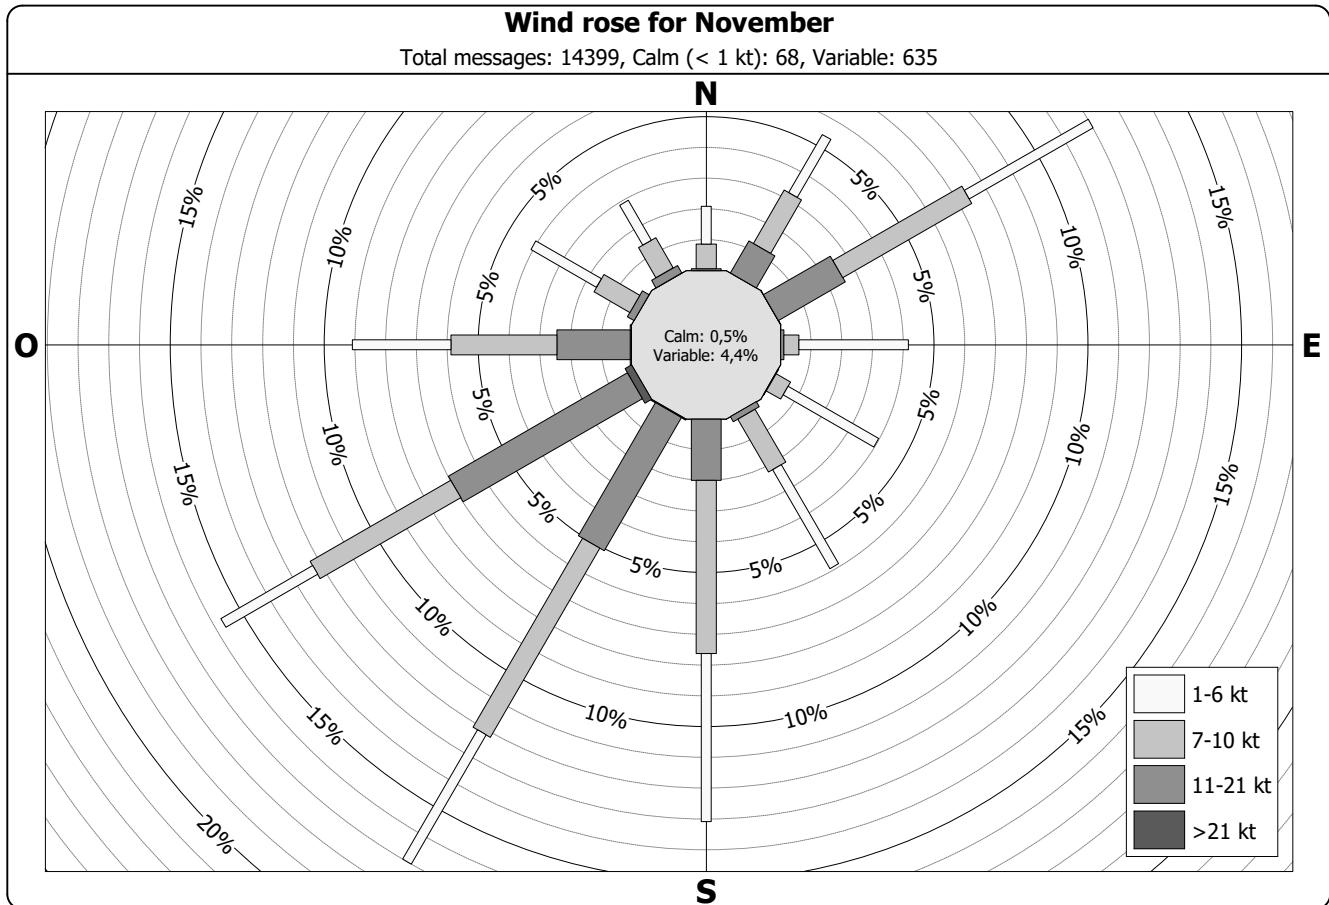

1.2 Wind speed and direction

1.2.1 Frequencies of wind speed and direction per ten-year period

		Frequency (%) of wind speed and direction for 2015 to 2024

1.3 Head/tailwind and crosswind RWY 24 (06)

The algorithm used to derive crosswind and tailwind information takes account of the runway alignment.

Headwind:

Wind speed $\times \cos$ (deviation between wind direction and runway direction). A positive value denotes a headwind, and a negative value denotes a tailwind.

Crosswind:

Wind speed $\times \sin$ (deviation between wind direction and runway direction). A positive value denotes a crosswind from the right, and a negative value denotes a crosswind from the left.

For the calculation of the wind components no use of gusts are made.

1.3.1 Head/tailwind and crosswind RWY 24 (06) per ten-year period

Frequency (%) of runway wind for 2015 to 2024												
Calm: 0.6% Variable: 5.6%		Wind speed (kt)										
		1-5	6-10	11-15	16-20	21-25	26-30	31-35	36-40	41-45	46-50	>50
